

The *Journal of Pharmacy Practice and Research* uses an adapted form of the Vancouver style of referencing as outlined in the examples below. References should be numbered consecutively in the order in which they are first mentioned in the text. Titles of journals cited are to be abbreviated according to Medline convention <www.ncbi.nlm.nih.gov/entrez/>. The Journal style requires a space to be inserted before the volume number and page numbers when citing journal articles. Avoid using abstracts as references. Avoid citing a personal communication unless it provides essential data not available from a public source. Obtain written permission from the source and in the text after the comment include in brackets: the person's name, position and date of communication. Information from manuscripts submitted but not accepted by a journal should be cited in the text. Ensure that there are sufficient details in the text describing the work and after obtaining written permission and verification from the source, include after the comment in brackets: unpublished observations and year. Also refer to the 'Information for Authors' <http://jppr.shpa.org.au/lib/pdf/Information_for_authors.pdf>.
