## **CAPLACIZUMAB**

BRAND NAME CABLIVI

DRUG CLASS Nanobody (bivalent, humanised), antithrombotic

AVAILABILITY Vial contains 10 mg of caplacizumab.

Also contains sucrose, citric acid, sodium citrate dihydrate and polysorbate-80.

Prefilled syringe contains 1 mL of water for injections.1

pH No information

PREPARATION Reconstitute the vial using the prefilled syringe and vial adapator provided.

Add the solvent slowly and mix gently to avoid foaming. With the syringe still attached, allow the vial to stand for 5 minutes at room temperature before drawing

the dose back into the syringe.1

The solution is clear and colourless to slightly yellow.1

STABILITY Vial: store at 2 to 8 °C. Stable for 2 months below 25 °C. Do not return to the fridge.1

Reconstituted solution: stable for 4 hours at 25 °C.1

**ADMINISTRATION** 

IM injection Not recommended

**SUBCUT injection** The first dose must be given by IV injection.<sup>1</sup>

Inject into the abdomen. While undergoing daily plasma exchange treatment, inject

the dose after plasma exchange.1

Suitable for self-administration after appropriate patient education.<sup>1</sup>

**IV injection** Suitable for the first dose, inject the dose before plasma exchange.<sup>1</sup>

IV infusion Not recommended

COMPATIBILITY Do not mix with other medicines

INCOMPATIBILITY No information

SPECIAL NOTES Missed doses can be given within 12 hours. If more than 12 hours has elapsed wait

for the next dose.1

Caplacizumab increases the risk of bleeding. Contact the pharmacist for advice about

use with anticoagulants or antiplatelets or preceding surgery.1
